

HOOFGEL

HOOFGEL for the maintenance of your animals' claws

Natural support for the external health of joints and claws. If the health of the claws and legs of the cow leaves something to be desired, this leads to economic damage for the company and causes discomfort and pain in the animals. By taking timely measures, the chance of abnormalities in the legs and joints of the cattle decreases. The condition of the claws and joints is determined by various factors, including housing, feed/ration, resistance, condition, heredity, production level, infection pressure and hygiene. Healthy legs are crucial for optimal production, feed intake and fertility.

By properly reducing the chance of diseased claws and joints, among other things, the costs of tackling such problems are prevented. HoofGel is a care product for the claws of farm animals, which can be easily applied with a brush. The product softens and cares for the skin and claw. In addition, it stimulates tissue healing and tackles inflammations and problems in a natural way.

Recommended use:

- Hoof Care: Trim the claw and apply Hoof Gel with a brush and tape the hoof for 3 days
- For best results, clean the claw before use
